

ACEGrid[®] GA

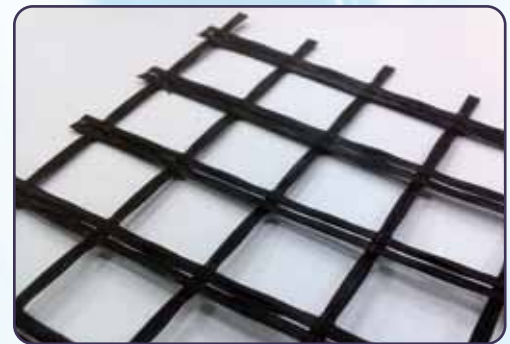

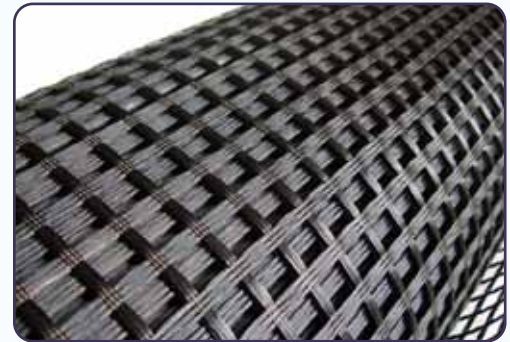

Introduction

ACEGrid[®] GA Series are a kind of reticular structural material with high alkali-free glassfiber.

It withstands high and low temperatures and can resist corrosion. Glassfiber geogrid can not only decrease the cost of construction but also prolong the service life of the pavement.

Applications

- Reinforcement of roadbase in soft soil.
- Reinforcement of flexible pavement and concrete pavement.
- Using for road widening and asphalt road repairing.
- Pavement surface reinforcement of road and airport.

Characteristics

- High tensile strength with low elongation.
- Excellent temperature resistance and good compatibility with asphalt.
- Reducing reflective cracking of the road.
- Easy installation and lower maintenance cost.
