

ACEDrain™ S

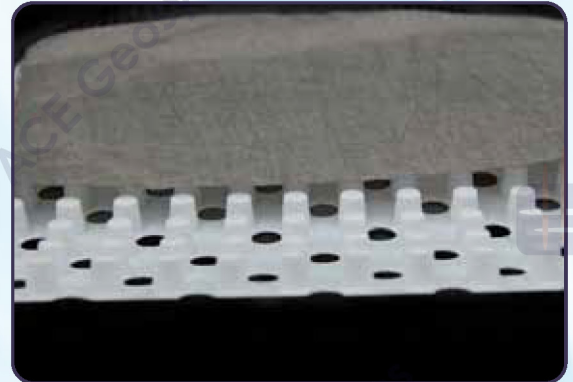

Introduction

ACEDrain™ S Series are a two-part geocomposite, consisting of high-impact polystyrene core wrapped with a gray polyester nonwoven geotextile.

The fabric is covered to each dimple to prevent soil penetration into the water channel as well as to allow the water flow into the drain core.

It can be used horizontally or vertically to provide full coverage drainage.

Horizontal applications include plaza decks or athletic fields. Vertical applications include seeping soil slope and retaining walls.

Applications

- Plaza decks.
- Floor slabs.
- Drainage interceptors.

Characteristics

- Strong and durable materials.
- Drainage systems enhancing.
- Great water flow capability without obstruction.
